

POULTRY LINE

COMPLEMENTARY AND MINERAL FEED FOR POULTRY

Containing yeasts produced with innovative technology.

**Vitasol produces irradiated brewer's yeast
for over 75 years.**

PRODUCTS

FUNCTION

PRIMOSALE STANDARD - OP002

complementary mineral feed for broilers and laying hens, should be between 2.5-3% of the total amount of complete feed. It contains the main macronutrients and microelements able to correct calcium, phosphorus and sodium deficiencies and satisfy nutrients requirements for maintenance and production. Specifically indicated to prevent reduced growth and improve eggs and meat production.

CHICKEN AND TURKEYS - OB007

complementary feed for broilers and fattening turkeys, should be between 0.5-1% of the total amount of complete feed. Created to satisfy vitamins and microelements requirements thanks to brewer's yeast, rich in essential components. The products must be correctly mixed to a mineral integration rich in macronutrients.

BROILER 3,5% - NO030

mineral complementary feed for starter period, should be between 3.5-4% of the total amount of complete feed. This product has been formulated to ensure the best production performances through a balanced content of mineral salts and vitamins. In particular, it supplies some essential amino acids, such as lysine and methionine, able to satisfy high growth needs and 6-phytase enzyme, to improve phosphorous assimilation.

POLLIMIX 3% -NO022

complementary mineral feed for broilers, should be between 3-3.5% of the total amount of complete feed. The product contains VITALIEVIT D, (Vitasol's patent for natural Vitamin D enrichment) and all essential components featuring brewer's yeast (proteins, B vitamins, enzymes etc.). Moreover, the product provides all vitamins and trace elements needed by animals.

POLLOVO - NO016

complementary mineral feed for broilers and laying hens, should be 3% of the total amount of complete feed. Formulated to satisfy phosphorus, sodium and vitamins necessities. This feed contains VITALEVIT D (Vitasol's patent for natural Vitamin D enrichment). The product must be mixed to a correct calcium supplement in order to satisfy nutritional needs of both broilers and laying hens.

BEL-POLLO1,5% - NO019

complementary mineral feed for broilers and fattening turkeys, should be 1.5% of the total amount of complete feed. Created to satisfy vitamins and amino acids needs, it contains lysine, methionine, and threonine, very efficient in increasing profitability by enhancing the meat yield and performances. The product must be mixed to a correct mineral supplement, rich in macronutrients.

BEL-UOVO 1,5% - NO018

complementary mineral feed for laying hens, should be 1.5% of the total amount of complete feed. The product contains lipid and hydro-soluble vitamins and the main microelements (zinc and manganese) to obtain the best production performances (egg laying). Furthermore, the product contains essential amino acids, such as lysine, methionine and coloring agents (canthaxanthin) for egg yolk pigmentation. The product must be mixed to a correct mineral supplement, rich in macronutrients.
